

DONIC®

The combination of DONIC SawTec and the DONIC Cork Covered System

The DONIC SawTec System uses plies that have been cut with a saw rather than with a knife. To prepare the wood for sawing, it is dried at an optimum 10% humidity.

Ply that have been cut with a knife unavoidably have fine tears that make the wood more unstable. SawTec System plies do not splinter and are equally stable throughout. This makes them ideal for table tennis, producing blades that provide consistency and good feel.

DONIC Cork Covered-System

Blade handles for the DONIC Cork-Covered system are made of wood, but completely covered with natural cork. This patented system ensures a perfect grip!
